LOKMAN BIN KHODZIRI

Aspiring Fullstack Developer · React · Node.js · Java Spring Boot

Selangor, Malaysia · lokmankhodziri@gmail.com · linkedin.com/in/lokmankhodziri · github.com/lokmankhodziri · lokmankhodziri.vercel.app

PROFESSIONAL SUMMARY

Final-year Information Technology student with hands-on project experience building fullstack web applications using React, TypeScript, Node.js, and Java Spring Boot. Delivered a production-ready client website and a fullstack expense tracking system with JWT authentication, Docker containerisation, and a Jenkins CI/CD pipeline. Currently completing a Final Year Project (Muslim-friendly travel planner) with live third-party API integrations. Background in engineering brings strong problem-solving discipline and a systematic approach to software development.

TECHNICAL SKILLS

Frontend	React.js, TypeScript, Vite, HTML5, CSS3, TailwindCSS, Responsive Design
Backend	Node.js, Express.js, Spring Boot (Java 17), REST API Design
Databases	MySQL, MongoDB, PostgreSQL, Firebase
DevOps	Docker, Docker Compose, Jenkins, GitHub Actions, Nginx, Linux (Debian/Ubuntu)
Deployment	Vercel, VPS (Linux), CI/CD Pipelines
Languages	JavaScript, TypeScript, Java, Python
Concepts	JWT Auth, MVC Architecture, RESTful Design, Agile/Scrum basics
Tools	Git, GitHub, Postman, VS Code, IntelliJ IDEA

PROJECTS

Safar – Muslim-Friendly Travel Planner (Final Year Project) – *Next.js · Node.js · Express · MongoDB · REST APIs*

- Architected a fullstack travel planning MVP integrating Aladhan (prayer times), Tugo (travel advisories), and halal food discovery APIs
- Implemented skeleton loaders, color-coded risk badges, and responsive mobile-first UI using TailwindCSS
- Designed modular Express.js backend with environment-based config, error handling middleware, and API abstraction layer
- Managed project lifecycle end-to-end: requirements, wireframes, development, and deployment

ExpenseTracker – Fullstack Financial Management System – *Spring Boot · React · MySQL · JWT · Docker · Jenkins*

- Built secure REST APIs with Spring Boot and JWT authentication including BCrypt password hashing and role-based access
- Integrated React frontend via Axios with clean separation of concerns between UI and API layers
- Containerised full application stack using Docker & Docker Compose; automated CI pipeline with Jenkins and dynamic DB provisioning (MySQL + H2 for tests)
- Applied MVC architecture, structured exception handling, and environment-specific configurations

GitHub

Belibis Yard Resort – Production Client Website – *React · TypeScript · Vite · TailwindCSS · Vercel*

- Delivered a fully responsive production website for a real client, from requirements gathering through deployment on Vercel
- Built reusable component library with mobile-first design; optimised bundle size and page load performance
- Designed scalable architecture to accommodate future booking system and admin dashboard integration

Live Demo: bebilisyard-demo.vercel.app

EDUCATION

Bachelor's Degree in Information Technology | **Open University Malaysia (OUM)** | *Expected 2026*

Diploma in Electronics (Communication) | **Politeknik Tuanku Syed Sirajuddin** | *2013 – 2017*

PROFESSIONAL TRAINING

Java Full Stack Development Programme | **Train2Place (MyMahir Programme)** | *Jul 2025 – Aug 2025*

- Built fullstack applications with Spring Boot, React, and MySQL; implemented JWT authentication
- Applied Docker, Docker Compose, and Jenkins CI/CD pipelines in a structured training environment

PROFESSIONAL EXPERIENCE

Product Development Technician II | **TF-AMD Microelectronics** | *Aug 2024 – Present* · Malaysia

- Streamlined data analysis workflows, reducing reporting turnaround time by 15% through process improvements
- Documented technical troubleshooting procedures, cutting testing cycle time by 10%
- Collaborated across cross-functional engineering teams in a high-pace production environment

Assistant Process Engineer | **Jinko Solar** | *Oct 2022 – Jan 2024* · Perai, Penang

- Increased production yield by 12% through targeted process optimisation and data-driven root cause analysis
- Reduced equipment downtime by 20% through systematic fault-finding and preventive maintenance improvements
